DETAILED ACTION

1. Claims 1-13 were allowed, claims 25-26 and 36-37 are allowed, and claims 14-24, 27-35, and 38-42 have been canceled without prejudice.
2. The drawings filed on January 28th, 2005 have been accepted.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance:

The invention as recited in the independent claims 25 and 36 are directed to a method and system for providing a predetermined service on a portion of a point-to-point communication link comprising the reception of a request from a remote client device on a first network device over a first communication link corresponding to establishment of a point-to-point communication link between the remote client device and a second network device. The request is then forwarded from the remote client device to the second network device from the first network device over a second communication link. The first network device then transmits a service capability parameter, indicative of the first client device's capability of supporting the predetermined service, from the first network device to the second network device. The remote client device and the second network device negotiate the point-to-point communication link. The second network device sends a negotiated service parameter, associated with the point-to-point communication link, to the first network device. A point-to-point communication link, including the first communication link, is established between the remote

client device and the second network device. And finally, the predetermined service is provided between the remote client device and the first network device on the first communication link. The claim limitation of particular interest is "receiving compressed packets on the first network device from the remote client device over the first communication link....decompressing the packets...and transmitting the decompressed packets..." Compression/decompression and encryption/decryption, like many services, would undoubtedly add a heavy computational load on the tunnel endpoints thereby rejecting a high number of user requests. The invention in view of the aforementioned limitation overcomes the data throughput limitations posed by the prior art. More specifically, the claim is allowable over the prior art of record because the prior art does not teach the negotiated/predetermined service being provided over the first communication link.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
